App Critiques

1. The Header Bar should extend all the way the way to the end of the status bar. This makes items like the wifi icon hard to see
2. When clicking a name there should be a way to go back to the main page without restarting the app on iOS
3. The empty string that takes the user to the image of Bender from futurama should say something
4. The date of the last robot in the list is cut off

Code Critiques

Whole File

1. Move inline css to its own stylesheet by using create()
2. Run prettier on the whole file to clean up code

Individual Lines

1. APP.js:11 namee should be name
2. APP.js:4-17 spacing for { name, year, img } fields should all be consistent. For example line 9 there is no space between {name and line 12 there is no space between the , and image
3. App.js:27 & 31 Consider using Robot for both functions to keep naming consistent, but otherwise nice use of functions
4. App.js:42 TouchableNativeFeedback is not available on iOS this should be changed to something that works on both platforms
5. App.js:50-60 Consider making the modal its own component and make it act like a details page. This would separate the code a bit more and make it easier to follow
6. App.js line 61: flexDirection is by default column consider removing it
7. App.js line 62: flexGrow is by default 0 consider removing it
8. App.js:73 remove extra return
